THE COLLABORATION

ITM & BOTTECCHIA

THE BEST FOR YOUR RIDES

Each **bike** works as a perfectly integrated and synergistic **system**, where every part contributes to the final performance.

This is why Bottecchia Cicli has always dedicated a study and a constant research to the best components for its bikes, to obtain race performance and achieve a unique riding feeling. This is the starting point of the project with **ITM**, an Italian brand that combines high technological innovation with a long experience of success in the world of components. The constant participation in the world of professional cycling and the continuous contact with technicians and mechanics has allowed ITM to constantly update its know-how, sometimes even anticipating innovation.

The collaboration between the two companies has led to the development of two new projects in the world of wheels : **FUGA** and **VOLATA**. Two models made exclusively for Bottecchia, inspired and designed for the world of racing, to enhance the performance of Bottecchia frames on road and dirty paths.

FUGA

CARBON + ALU

FUGA is the wheel that combines the advantages of the best materials to achieve the perfect balance between performance and comfort.

The tubeless carbon profile with 23 mm internal channel ensures exceptional performance and riding comfort.

Versatile and reliable, they guarantee an excellent riding feeling on both asphalt and dirty roads, thanks to the weight optimized for use on mixed routes. Thanks to the work of the designers, these wheels achieve an excellent combination of lightness, reliability and smoothness, ensuring optimum levels of safety and high comfort even over long distances.

FUGA 40

FUGA 40 is the version with medium rim of 40mm that thanks to the low weight of 1560 grams (the couple) develops a greater agility and ease of acceleration. Thanks to the 40 mm profile, this model is less subject to side winds and makes the bike more stable, especially in variable wind conditions, as can happen on the road or on open trails. Versatile and comfortable, they are suitable for a wide range of conditions and uses and are the ideal choice for those looking for a good compromise between performance, aerodynamics, stability and comfort.

FUGA 55

FUGA 55 is the 55mm high rim version designed to reduce drag, offering significant advantages at high speeds. It is ideal for fast and straight roads, where the priority is to keep the speed high. The increased profile also ensures a higher stiffness, which maximizes power transmission during sprints or on sections where faster accelerations are required.

TECHNICAL FEATURES

Rim Carbon fiber, height 40/55 mm, width 30mm, internal channel width 23 mm, tubeless ready.

Diameter 700c.

Couple weight 1560 g 40mm / 1570 g 55mm.

Breaking system Disc brake.

Spokes Stainless steel Straightpull aero profile, aluminium nipples.

Cassette Available for HG, MS12, XDR.

Front hub ITM, Sealed Cartridge Bearings, disc brake, 24 fori, interaxis 100 mm, axle diameter 12 mm.

Rear hub ITM, Sealed Cartridge Bearings, disc brake, 24 fori, interaxis 142 mm, axle diameter 12 mm.

Tires Tube, tubeless. From 25 to 65 mm.

ROAD & GRAVEL

VOLATA

FULL CARBON

VOLATA is the high performance wheel, characterized by carbon spokes and rim, designed for high speed competitions. The rim design has been created to optimize airflow around the wheel, significantly reducing drag and bringing greater energy efficiency, allowing you to maintain high speeds with less effort. Designed for professional road and gravel use, they not only improve acceleration, but also offer greater responsiveness in curves and more precise handling, guaranteeing superior performance on both asphalt and light dirt.

VOLATA 40

VOLATA 40 is the version with 40mm medium rim, which brings speed, performance and comfort to the highest levels. Thanks to the combination of rim and carbon spokes, the weight is reduced to 1364 grams only (the couple), which brings these wheels to the top of their category. With the perfect combination of lightness, smoothness and maneuverability they guarantee an incomparable riding feeling in every road condition.

VOLATA 55

VOLATA 55 is the version with 55mm high rim designed to offer the best aerodynamic efficiency and maximize performance at high speeds. It is ideal for time trials and competitions on fast and straight roads, where the seconds make the difference. The increased profile also ensures greater stiffness and thrust capacity, maximising power transmission during sprints or on sections where faster accelerations are required.

TECHNICAL FEATURES

Rim Carbon fiber, height 40/50 mm, width 30mm, internal channel width 23 mm, tubeless ready.

Diameter 700c.

Couple weight 1360 g 40mm / 1370 g 55mm.

Breaking system Disk brakes.

Spokes Straightpull carbon with aero profile, aluminium nipples.

Cassette Available for HG, MS12, XDR.

Front hub ITM, ceramic bearings, disk brake, 18 fori, interaxes 100 mm, axle diameter 12 mm.

Rear hub ITM, ceramic bearings, disk brake, 18 fori, interaxes 142 mm, axle diameter 12 mm.

Tires Tube, tubeless. From 25 to 65 mm.
